

# Emergency Dual Sewage Pump Station Delivered Overnight

*“Fantastic! I never thought you would be able to deliver the pump station in time. We were relying on you to deliver on time otherwise the pub would’ve had to be closed all weekend!”*

---

## THE CHALLENGE

Sewer pipes in a Melbourne CBD hotel had collapsed. The only option they had was to install a pump station and pump the waste to sewer. The pump station had to have dual pumps, fit under the stairwell and go through a standard doorway. The problem arose on Thursday morning and had to be fixed by Friday afternoon, before the weekend.

---

## THE SOLUTION

All Pumps was able to supply a custom fibreglass pump station, fitted with dual Sabre sewage grinder pumps and dual pump control panel. From a fibreglass tank in stock, All Pumps was able to modify it to fit under the stair well and through the doorways, fit the pumps into the Kwikflo Pump station and have the complete pump station air freighted to Melbourne, ready to pick for at 6 a.m. the next morning.

The final pump station was 1 m long, 1.1 m high by 650 mm wide with a 600 mm round access lid. It was fitted with Dual Sabre GGP-1501 sewage grinder pumps and 50 mm pipework, with swing check and isolation ball valves on each pump - a drop-in packaged solution, ready to go.
